

Social Initiative

- India is a growing market today and **MAKE IN INDIA** programme is going to make grew it faster thus the jobs scopes will increase as well as the number of entrepreneurs in the country will also soar but to take the advantages of these policies people need to be technically efficient because in this rigid market it's difficult to stand and you need to be extraordinary to grab the opportunities. Technology is a diverse field growing tremendously as it makes your life beautiful, simpler as well as faster and we are surrounded by technology so it's a need for every individual to have knowledge as well as proper understanding of the upcoming trends and we have to push our children from very young age in this field to get better understanding of it because we know if the roots will be strong and capable then only a tree of better future can grow.
- Technology is not a thing that can be taught theoretically from books it has to be taught by practical application and if we talk about our education system it takes more than five years to update simple syllabus and under this conditions we cannot even expect to add technical aspects in it and in that case the only solution is to feed them with this knowledge from external sources. However, some rich schools have now started taking initiatives to change things but as they can't change the syllabus they add these trainings under extra-curricular activities however it's not enough though its good they have started but if we talk about the kids who belongs to middle class families or poor families they don't have the privilege to have this stuffs in their schools.
- For these reasons **Robberspace Technologies will now take free sessions in such schools to increase overall mental growth of children under its "society development programme"** which indeed will help these children to catch up with their counterparts in future when we talk about equality we have to work on it to make it happen and that's what our social initiative is. Government has started **Skill India Programme** and we support it, we are moving a step forward and we expect the same from you. Let's take this great nation to superior heights together **Jai Hind.**
